	Examiner Thomas J. Williams	Art Unit 3657	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Acknowledgement is made in the receipt of the amendment and substitute specification filed August 20, 2008.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 18 and 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by US 3,774,735 to Hanke et al.

Re-claim 18, Hanke et al. disclose a drive unit, comprising: a hydrodynamic retarder having a rotor blade 12 and a stator blade wheel 11, the retarder is connected to the cooling system 16/17; a discharging device 25 suctions off a residual amount of the liquid medium. This is done against a pressure in the cooling system in a non-braking operation as is disclosed in the embodiment of instant figure 1.

Re-claim 20, the discharging device comprises a cylinder and is connected with the cooling circuit via a first conduit 24.

Re-claim 21, the cylinder is operatively connected at a point of highest pressure in the cooling circuit, adjacent scroll case 15 at the retarder outlet.

Re-claim 22, an adjustable throttle 33 is operably connected to the first conduit 24 with the at least one cylinder and the point of highest pressure, see the figure.

Re-claim 23, the discharging device further comprises a switchable valve 27.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hanke et al. in view of US 2,963,118 to Booth et al.

Hanke et al. is silent regarding the location of the retarder relative to the engine and transmission. Booth et al. teach a retarder combined with an engine and transmission (intermediate engine 10 and output shaft 11), wherein the retarder is located behind the transmission in a direction of force flow. It would have been obvious to one of ordinary skill in the art to have utilized the teachings of Booth et al. when having placed the retarder of Hanke et al. in a motor vehicle, thus optimizing the ability of the retarder to slow the vehicle as needed.

Art Unit: 3657

Allowable Subject Matter

7. Claims 24-27 and 29-34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

8. Applicant's arguments filed August 20, 2008 have been fully considered but they are not persuasive. Hanke et al. disclose in column 5 lines 4-12 that the working fluid is suctioned off by the discharge device 25 when a brake pedal is not pressed. As such it is the opinion of the examiner that Hanke et al. does in fact anticipate claim 18.

Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
